LAZARUS established cooperation with AssureMOSS project

by Adriana Freitas | Oct 27, 2023 | News

The **LAZARUS project** is pleased to announce a new collaboration as part of its networking and clustering activities with the **AssureMOSS EU project** (GA No 952647).

The mission of the Assurance and certification in secure Multi-party Open Software and Services (AssureMOSS) project is to produce a coherent set of automated, lightweight techniques that allow software companies to assess, manage, and re-certify the security and privacy risks associated with the fast-paced development and continuous deployment of multi-party open software and services (for which we introduce the MOSS acronym). Ultimately, we aim at supporting the creation of more secure MOSS software.

One introductory meeting between project representatives has already taken place, and areas of potential synergies between the two projects have been identified.
After that LAZARUS was invited to present in a panel at the AssureMOSS final event project on September 27th 2023 at CyberTech World event in Amsterdam.
Now we are exploring possible common actions including webinars and workshops.
More updates to come soon!

To learn more about the **AssureMOSS project** by visiting their website and follow their social media accounts on Twitter and Linkedin.
