

LAZARUS begins cooperation with KINAITICS EU project

by Adriana Freitas | Oct 27, 2023 | News

The **LAZARUS project** continues its networking and clustering activities and is pleased to announce it has begun a new collaboration with the **KINAITICS EU project** (GA No 101070176)

KINAITICS aims at exploring the new attack opportunities offered by the introduction of AI-based control and perceptive systems, as well as those offered by combination of behavioral understanding of physical systems and cyber-attacks.

A first meeting between project representatives took place on September 22nd 2023, where participants identified the complementarity between the two projects and agreed to discuss further at a technical level at a later stage when each project's work is at a more mature level. Among the possible actions explored are also joint dissemination activities, including webinars or workshops. More updates to come soon!

To learn more about the **KINAITICS project** visit their [website](#) and follow their social media account on [LinkedIn](#).

This project has received funding from the European Union's Horizon Research and Innovation Programme under Grant Agreement nº 101070303.
